FlipFlow

By Record UK Ltd

Detailed description

The record FlipFlow range of products is designed to control the flow of people at airports and other sensitive areas inside buildings. Generally, people pass through one-way access systems one at a time and in one direction only. The Record FlipFlow prevents unauthorized access from public areas to restricted zones. Any attempt to cross FlipFlows in the unauthorized direction is recognized by an intelligent sensor system and triggers an alarm.

Applications:

Enables safe, efficient, user-friendly separation of monitored areas and public zones. Typical applications include airside/landside separation at airports as well as transit zones to restricted areas. Record FlipFlows can be used:

- Airports.
- Sensitive areas in ports and railway stations.
- Public buildings (e.g. museums) or industrial buildings.
- Side entrances in supermarkets.

Features:

- Provides multiple options to conform to desired level of security.
- Allows the reallocation or exclusion of security staff.
- Easily fits into existing pedestrian exit corridors.
- Signal interface, allowing remote monitoring and control.
- User interface for parameter settings, error codes and alarms.
- Selectable modes for operation, cleaning and maintenance.
- Integrates with existing TCP/ IP networks.

Product guidance - As Standard

Dimensions (l x h x w):

- FlipFlow Single: 5242 x 2365 x 1230 mm.
- FlipFlow Twin: 5242 x 2365 x 1230 mm.
- FlipFlow Wide: 2248 x 2365 x 1230 mm.

Clear height:

2150 mm.

Options

FlipFlow Twin Basic/ Twin Interlock (for enhanced security):

- Functions as an airside/ landside barrier.
- Module to enhance performance available.
- High-performance interlock function.
- Effectively eliminates the possibility of third parties passing through, or handing over objects through interlock.

FlipFlow Single (for discrete security):

- Functions as a barrier between two zones inside the airport building.
- Security personnel can keep an eye on the installation at all times.
- A further option is volumetric monitoring of stationary objects.

FlipFlow Wide (for enhanced convenience):

- Ideal for Customs entrances.
- Security personnel are in the immediate vicinity.
- Reduced level of security compared with Twin FlipFlow models.
