

Royal Blackburn Hospital

“Record’s automatic doors situated throughout the hospital consistently perform ensuring the flow of traffic in this busy environment is never impeded”.

Zarko Babic
Technical Services Manager, Engie

Brief

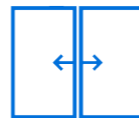

To provide a range of welcoming, automatic door solutions throughout the Royal Blackburn Teaching Hospital, the largest hospital in East Lancashire.

Solution

Record supplied and installed 5 x STA 20 automatic sliding doors at the front and rear entrances, 40 x DFA 127 swing door operators throughout the hospital and FTA 20 folding doors on the entrance to A & E and in corridors.

Result

Automatic door solutions to suit the varying needs of the hospital and ensure the efficient flow and safe movement of patients, visitors and staff at all times.

STA 20 sliding door is ideally suited to handle large volumes of people, at any one time.

DFA 127 swing operator is silent in operation making it suitable for quieter areas such as hospital wards and care homes.

FTA 20 folding door is excellent for limited spaces, which exclude use of a sliding door as it enables the full width of the entrance to be almost fully retained.
