# Sumburgh Airport

Brief

Create a secure one way exit that could handle a heavy flow of pedestrian traffic without compromising on security at Sumburgh Airport in the Scottish Highlands.

Solution

Installed 2 x Record FlipFlow exit lanes featuring advanced detection and control technology, integrated with functional and reliable barrier components.

Result

A sleek and modern looking exit corridor that provides a high level of security and allows the reallocation of security staff.

 Innovative 3D imaging and multiple infrared sensors to detect security breaches.

 Allows high volumes of pedestrian traffic without jeopardising controlled access.

 A cost efficient solution for transport hubs, improving security and eliminating human errors.

''We installed the Flip Flow on time, whilst minimising the impact on flights & the airport's everyday operation.''

**John Anderson,
Record Project Manager**
